*Memorandum on Rainfall of June and July and the Probable Amount during August and September, 1969.*

## 1. Weather in India during June and July.

The rainfall for the months of June and July 1969 was in moderate excess in Madhya Maharashtra, in slight excess in east Uttar Pradesh, Telangana and Rayalaseema, normal in the Bay Islands, Assam, Sub-Himalayan West Bengal, Orissa, Bihar Plains, Punjab, Himachal Pradesh, Jammu and Kashmir, Madhya Pradesh, Konkan, Marathwada, Vidarbha, coastal and north Interior Mysore and Kerala, in slight defect in Bihar Plateau, Haryana, east Rajasthan, Saurashtra and Kutch, coastal Andhra Pradesh and south Interior Mysore, in moderate defect in Gangetic West Bengal, west Uttar Pradesh, Gujarat Region and Tamil Nadu and in large defect in west Rajasthan and the Arabian Sea Islands.

*June:* Under the influence of a cyclonic storm in the west central Bay of Bengal, the southwest monsoon had advanced as a feeble current into southeast Bay and south Andaman Sea on 13th May and into south Kerala, southeast Arabian Sea and southwest Bay up to Lat. 10°N on the 17th May. The onset of the monsoon over Kerala was about a fortnight ahead of the normal date. However, there was no further advance during the subsequent week. The monsoon advanced further gradually in the last week of May and on 1st June, the northern limit of the monsoon was passing through Karwar, Nellore and Cox's Bazar.

A trough of low pressure lying in east central Arabian Sea off Mysore-south Maharashtra coasts on 1st June extended northwards and became well marked on 3rd. In this trough, a depression formed off Saurashtra—north Maharashtra coasts on 5th morning, moved northeastwards, crossed Saurashtra coast near Diu on 6th and weakened into a low pressure area on 7th over Gujarat Region. These caused the advance of the monsoon into Maharashtra State, south Gujarat State and the rest of the central Arabian Sea. The heavy rains in Saurashtra associated with the depression are reported to have caused floods in some of the local rivers and disruption of rail traffic in Veraval—Porbandar—Jamnagar sections.

A low pressure area formed over northwest Bay and adjoining Orissa on 3rd, moved north into Gangetic West Bengal and neighbourhood, persisted there till 5th and later moved away northeastwards across Assam. This system caused the advance of the monsoon into the rest of the Bay of Bengal and the entire northeast India. At the end of the first week of June, the northern limit of the monsoon was passing through Porbandar, Baroda, Nagpur, Jharsuguda and Motihari.

The southwest monsoon which had thus advanced into south Gujarat State, Maharashtra State and northeast India by 7th June—a few days ahead of the normal date—did not make any further advance into the

country till the end of the month. The advance of the monsoon into Madhya Pradesh and Uttar Pradesh was consequently delayed by 10 to 15 days.

The monsoon was generally weak along the west coast, Gujarat State, Orissa, Gangetic West Bengal and Bihar Plateau during the period 8th to 15th June. However, under the influence of troughs of low pressure which formed in the east central Arabian Sea off the west coast in the course of the last ten days of June, the monsoon was active along the west coast on many days during that period.

At the end of the first week, the seasonal trough was passing through Bihar Plains, Sub-Himalayan West Bengal and north Assam and remained so till the end of the second week causing heavy rain and floods in Assam and Sub-Himalayan West Bengal in the second week. The floods in north Assam inundated vast areas of jute and paddy fields, disrupted road traffic and rendered many families homeless. The floods in Jalpaiguri and Cooch Behar district inundated vast areas and marooned thousands of people.

A depression formed in the central Bay of Bengal on the evening of 16th, initially moved north and later northeast, crossed east Pakistan coast on the 19th night, weakened into a low pressure area and merged with the seasonal trough over Assam on 20th, which in turn became well marked between 21st and 23rd and caused heavy to very heavy rain in Assam resulting in another wave of floods in many parts of Assam which inundated vast areas of standing crops, damaged thousands of houses, paralysed road and rail communications and affected about 5 lakhs of people. During the same period, there were also reports of floods in Sub-Himalayan West Bengal.

There was isolated very heavy rain in Telangana and Rayalaseema on 14th and 15th which is reported to have caused breaches in the railway track between Mahbubnagar and Dronachalam, dislocating rail traffic and telecommunications in that area.

During this month, three western disturbances moved across north-west India as upper air troughs causing light to moderate rain or thundershowers in the Western Himalayas and the adjoining plains, the first one between 3rd and 6th, the second between 10th and 12th and the third during the last 3 days.

The seasonal low pressure area over West Pakistan became well marked on the evening of 20th and remained so for the next 2 days, causing scattered dust-storms in Rajasthan, Haryana and Punjab on those days. According to press reports, the dust-storms in Barmer district dislocated rail traffic between Barmer and Jodhpur with sand covering the rail track at some places up to 3 feet deep.

The rainfall for the month of June was in moderate excess in Rayalaseema, in slight excess in south Assam, Bihar Plains and Madhya Maharashtra, normal in the Bay Islands, north Assam, Sub-Himalayan West Bengal, Jammu and Kashmir, Konkan and coastal Mysore; in slight defect in Telangana and Kerala; in moderate defect in Gangetic West Bengal, Orissa, Bihar Plateau, east Uttar Pradesh, Himachal Pradesh, east Madhya Pradesh, Gujarat State, Vidarbha, coastal Andhra Pradesh, Tamil Nadu and Interior Mysore; and in large defect in west Uttar Pradesh, Haryana, Punjab, Rajasthan, west Madhya Pradesh, Marathwada and the Arabian Sea Islands.

*July:* The southwest monsoon advanced into east Madhya Pradesh and east Uttar Pradesh on 1st July under the influence of an upper air cyclonic circulation in the lower troposphere lying over northeast Madhya Pradesh and adjoining east Uttar Pradesh. A low pressure area formed over northwest Bay of Bengal on 2nd July and moved northwestwards to south Uttar Pradesh and adjoining north Madhya Pradesh by 7th causing the advance of the monsoon into the whole of Uttar Pradesh and Madhya Pradesh and extreme south-east Rajasthan by 8th. This low pressure area persisted over Uttar Pradesh till 13th and merged into

the seasonal trough, but the upper air circulation associated with this low moved into Haryana by 14th and weakened into a trough on the same day. A trough of low pressure formed in the east central Arabian Sea off Kerala coast on 11th, shifted gradually northwards and lay off north Maharashtra—south Gujarat coasts on 14th and became well marked on 15th. These two systems caused the advance of the monsoon into the rest of the Arabian Sea, into north Gujarat State and northwest India. Thereby the monsoon covered the entire country by 15th July.

In the first fortnight, the monsoon was active in Konkan from 1st to 3rd and 12th to 15th, in Madhya Maharashtra from 1st to 3rd, in Marathwada on 2nd, 3rd and 6th (being vigorous in Madhya Maharashtra on 1st and 3rd, in Konkan on 2nd and in Marathwada on 3rd), in Vidarbha on 4th and 15th, in coastal Mysore on 2nd, 5th, 6th, 12th, 13th and 14th, in Kerala on 5th and 12th, in Madhya Pradesh from 4th to 7th, in east Uttar Pradesh on 5th, 6th, 9th, 10th and 12th, in west Uttar Pradesh on 8th and in Gujarat Region on 14th. The Monsoon was also active in Gangetic West Bengal and Bihar Plateau on 1st and in Orissa on 3rd.

A trough of low pressure lay off Tamil Nadu—Ceylon coasts between 9th and 11th and became less marked on 12th. It caused good rainfall in Tamil Nadu between 10th and 12th.

The well marked trough of low pressure which was lying over east central Arabian Sea off north Maharashtra—South Gujarat coasts on 15th shifted further northwards across Saurashtra—Kutch and merged with the seasonal low pressure area over West Pakistan by 18th, causing vigorous monsoon conditions in Saurashtra and Kutch on 16th and active monsoon conditions in Saurashtra and Kutch on 17th and in Gujarat Region on 18th. A low pressure area, which moved from central Uttar Pradesh and adjoining north Madhya Pradesh westwards across south Rajasthan and Gujarat State into the southern parts of West Pakistan and adjoining north Arabian Sea between 20th and 23rd, caused active to vigorous monsoon conditions in Gujarat State on 21st, 22nd and 23rd. The monsoon was active in Madhya Maharashtra on 21st and 22nd, in south Interior Mysore on 22nd and 23rd, in Kerala on 23rd and in coastal Mysore on 24th. It was vigorous in Kerala on 24th. The monsoon was also vigorous in Marathwada and active in Madhya Maharashtra on 31st. The heavy rains and strong winds in Kerala were reported to have caused many house collapses and floods in the local rivers. Malapuram and Kottayam were the worst affected districts. The heavy rain in Mysore State caused floods in the Netravathi and other rivers, many landslides in the ghats and dislocated road traffic in many parts of the state, the worst affected being south Kanara district.

During the period 16th to 25th, the monsoon trough was running from Rajasthan to north Bay and was well marked with a few low pressure areas moving in the trough westwards from north Bay to the central parts of the country. These caused active monsoon conditions in Gangetic West Bengal from 18th to 20th, in Orissa on 20th and 21st, in Bihar State from 18th to 21st in Uttar Pradesh from 16th to 19th and on 24th and 26th, in east Rajasthan on 17th, 18th, 20th, 21st, 25th and 26th, in Punjab on 26th and in Madhya Pradesh on 16th, 17th, 20th and 24th. According to press reports, the heavy rains in Rajasthan on 25th and 26th caused floods in Ganganagar, Sawai Madhopur and Nagaur districts.

A depression formed in northwest Bay on 28th about 400 kms. southeast of Calcutta, moved northwest, became deep on 29th, crossed north Orissa coast near Balasore on 30th evening and lay on the morning of 31st about 50 kms. northeast of Jharsuguda. It caused active monsoon conditions in east Madhya Pradesh on 28th, 29th and 31st, in Orissa from 29th to 31st and in west Madhya Pradesh on 30th. According to press reports, the heavy rains in Orissa on the last 3 days caused floods in many districts of Orissa. River Indravathi rose in spate and flooded many parts of Jagdalpur.

There was heavy rain in Assam from 8th to 11th and 15th to 17th. These two spells of heavy rain caused floods in many districts of north Assam including NEFA resulting in very heavy damage to vast areas of standing crops and many houses.

The rainfall for the month of July was in moderate excess in east Uttar Pradesh, Madhya Maharashtra, Marathwada and Telangana, in slight excess in Orissa, Punjab, east Madhya Pradesh, north Interior Mysore and Kerala, normal in the Bay Islands, north Assam, Sub-Himalayan West Bengal, Bihar State, Haryana, Himachal Pradesh, Jammu and Kashmir, east Rajasthan, west Madhya Pradesh, Saurashtra and Kutch, Konkan, Vidarbha, coastal Andhra Pradesh Rayalaseema and coastal Mysore, in slight defect in south Assam Gangetic West Bengal, west Uttar Pradesh, Tamil Nadu and south Interior Mysore; in moderate defect in Gujarat Region and in large defect in west Rajasthan and the Arabian Sea Islands.

## 2. Conditions having influence on the rain of August and September, 1969.

A foreshadowing of the monsoon rainfall of June to September was issued early in June. Recent data have been examined to see if any useful supplementary foreshadowing for the remainder of the season can now be given. The relevant data are the following:—

*Indian Pressure in July.*—Pressure was generally below normal over the entire country, except Marathwada, Telengana and south of Latitude 17°N.

*Indian Ocean Pressure in July.*—At Mauritius, pressure was in excess of normal by 2.3 mb.

*Java Rain.*—The monthly rainfall departures from October, 1968 to February, 1969 were +3 percent, +17 percent, +36 percent, -16 percent and +2 percent respectively.

*South Rhodesia Rain.*—Rainfall from October, 1968 to April, 1969 was in excess by 17.5 mm.

*South American Pressure.*—Pressure departures were as follows.—

	Buenos aires	Cordoba	Santiago
June, 1969..	.. .. -2.4 mb.	-1.1 mb.	+0.9 mb
July, 1969	.. .. +0.7 mb.	-1.7 mb.	+0.5mb.

*Indo-Gangetic River Discharges.*—Mean departure of the total river discharges during April and May, 1969 was in excess by 45 (1,000 cusecs).

### 3. Inferences from the Information

For the Peninsula—taken to consist of Maharashtra, Gujarat, Madhya Pradesh, Interior Mysore, North ; Telangana and Coastal Mysore (excluding South Kanara)—the factors used are, in the order of decreasing reliability, Mauritius Pressure, Indian Pressure, Java Rain and South Rhodesia Rain. Of these factors, this year, South Rhodesia Rain is indifferent, Java Rain is slightly unfavourable while Indian Pressure and Mauritius Pressure are both very unfavourable. The statistical analysis indicates that there is a four to one chance that the total rainfall of August and September 1969 in the Peninsula will be below 99 percent of the normal.

For Northwest India—taken to consist of the Uttar Pradesh, Haryana, the Punjab, Himachal Pradesh, Delhi, Chandigarh and Rajasthan—the factors used are, in the order of decreasing reliability, Indo-Gangetic River Discharges, Indian Pressure, Mauritius Pressure, South American Pressure and South Rhodesia Rain. Of these factors, this year, Indian Pressure and South Rhodesia Rain are both indifferent, Indo-Gangetic River Discharges are moderately unfavourable, South American Pressure is unfavourable while Mauritius Pressure is very unfavourable. The statistical analysis indicates that there is a four to one chance that the total rainfall of August and September 1969 in Northwest India will be below 102 percent of the normal.

### 4. Summary

The total rainfall during August and September 1969 is likely to be slightly below normal both in the Peninsula and in Northwest India.
